SPECIFICATIONS:

STATEMENT OF PURPOSE

Knysna Municipal, Sedgefield Water Reticulation invites qualified contractors to submit proposals/quotations for professional services to clean and inspect Three (3) drinking water reservoirs located in Sedgefield in accordance with the Scope of Work as described herein.

INTRODUCTION

Knysna Municipality owns and operates Three (3) drinking water reservoirs, Blombos: Reservoir #1, Reservoir #2 and Cloud 9 Reservoir. Cloud 9 with storage capacity of 4.0 ML (4 million liters) and Blombos #1 with 1.5 ML and Blombos #2 with 2.5ML (million Liters), respectively, located in Sedgefield. The Blombos reservoirs can be reached via a reinforced concreted road from Cicad Single Road and Cloud 9 can be reached by a gravel off-road.

At the end of each reservoir is a concrete roof with ventilation openings covered with concrete slabs and a manhole opening, which leads to the bottom of the reservoir via a metal stairway. The structures are made of reinforced concrete and have rubberized polypropylene liners. Attachment A includes the following information about the reservoirs:

1. Location Maps

The goals of this project are to clean both reservoirs using qualified plumbers or certified commercial divers

QUALIFICATIONS

All bidders shall have a qualified Plumber or diver in case of diving cleaning on the contractor team applicable to the work to be performed at the time that the bid is submitted.

SCOPE OF WORK

RESERVOIR CLEANING AND INSPECTION

The Contractor shall provide reservoir cleaning and inspection services as described herein. As there is no electricity available on the Cloud 9 Reservoir site, Contractors will have to provide their own power and lights. The reservoir area is not served by sanitary sewers. All sediment-laden water will need to be dechlorinated and discharged to vacant grassland at Cloud 9 around the reservoir and at Blombos Reservoirs to the storm water system in a manner, which prevents erosion. In addition to the sediment that has accumulated at the bottom of the reservoir, floating debris will also need to be removed as part of this cleaning project. The inflow and outflow pipes may be closed for some portion of the cleaning days, but they may need to be operated for part of the time. One reservoir needs to remain active at all times. All equipment and materials required to perform the scope of work shall be provided by the Contractor. All equipment and divers shall be properly disinfected prior to each dive in accordance with the SANS for the Disinfection of Water Storage Facilities.

The scope of work for the quotation includes, but is not limited to:

1. Removal and proper disposal of all sediments from the bottom and the sloped sides of all reservoirs as well as any floating debris by means of equipment described. In case of diving: this should be accomplished while the reservoir is full.
2. General inspection of the interior and exterior condition of the reservoirs.
3. High quality video and photos of the reservoir cleaning and inspection operations upon project completion with a detailed report summarizing the cleaning and inspection methodology, assumptions, findings.

Equipment Requirements

Description : Owned Plant / Equipment	Number of Units
Extension Ladders	2
Brooms (Industrial)	6
