Battery Specification Sheet

Battery Type:
The battery shall be constituted of open (vented) nickel cadmium cells, and shall fully comply with IEC 623 (1990 Edition) requirements and its amendments 1&2. Corresponding type test approval certificates shall be submitted.

The battery shall be made of single cells, connected in series.

Electrodes:
The positive and negatives of the cells shall be of pocket plate type: the active materials shall be retained in pockets formed from double-perforated nickel plated steel strips. To achieve the highest mechanical strength and the lowest internal electrical resistance all steel parts Good day G

Kindly see attached adverts for placement.

Regards
Phindiswa

Electrolyte:
The electrolyte shall be an aqueous solution of potassium hydroxide (KOH) and lithium hydroxide (LiOH).

Separator:
The cell separator shall consist of a plastic grid (open rod insulation) in order to separate the plates from each other, and allow free circulation of electrolyte between the plates.

Container:
The cell container shall be made of translucent polypropylene. The electrolyte level of the cells shall be visible through the side walls and min. and max. electrolyte levels marks shall be displayed on at least one side of the container.

Vents:
Each cell shall be equipped with a flip-top vent for easy maintenance. Screw vents that must be removed from the cells when topping up with water are not acceptable. Vents must be of the flame arresting type that does not allow an external gas explosion to ignite the charging gasses inside the cell container.

Inside the cell and under the vent hole, a plate group protector shall be located to prevent foreign objects that may come in through the vent to cause accidental short circuit of the cell and also prevents electrolyte splash (splash guard).
