**Long-term water conservation: the only solution**

According to Knysna Executive Mayor, Geortheen Wolmarans, the recent rains will not resolve our water situation. She asks all residents to continue using water sparingly, as she urged: “Wasting water is the profligate, limited resource it must become a way of life – not only in Knysna, not only in South Africa, but globally.”

“Our consumption is still high and it is vital that our consumption is curbed so that our water reserves can be replenished. Although we have seen some positive results due to our Water Awareness Campaign, as a town, Knysna has not reached our consumption target of 8 megalitres per day, which includes the 2% allocation for business use. This equation to 88 litres per person per day.”

“We have seen better results in Sedgefield, with consumption around 2 megalitres per day, while the target is 1.9 megalitres. A big thumbs-up to residents of Sedgefield for coming together and showing us all what can be done.”

While the rivers are full and flowing, Knysna has a total water pumping capacity of 9.9 megalitres per day augmented by other sources to 11.6 megalitres. Knysna’s consumption is still too high and is often above 12 megalitres, while the aim is for a target of 8 megalitres per day. This means the off-channel (not situated on an actual river) Alkoford Dam, which is mainly rainy season, is already overflowing.

The geography of the region limits the catchment area that feeds Knysna’s storage capacity.

“We need to bring the level of consumption down to below our pumping capacity,” says Mayor Wolmarans, “In doing so the Alkoford Dam and the Gibeon dam can be refilled. When these dams are full, it gives the town a buffer of three months, instead of a few weeks as is the situation at present.”

**By-law relating to Community Fire Safety**

Council approved the by-law relating to community fire safety on Monday 28 March. We will publish extracts of the by-law in this newsletter during the next few months. Residents are also encouraged to visit our website at www.knysna.gov.za to access the full document.

**WINTER IS COMING**

Weather conditions are ideal. Long-term water conservation is the only solution.

**Water restrictions in place remain:**

Residents are encouraged to only use tap water for domestic consumption, not for the filling of watering pools.

**Drought is coming.**

Thanks to the monthly rainy season, the rivers are full and flowing. We now have a total water pumping capacity of 9.9 megalitres per day augmented by other sources to 11.6 megalitres. Knysna’s consumption is still too high and is often above 12 megalitres, while the aim is for a target of 8 megalitres per day. This means the off-channel (not situated on an actual river) Alkoford Dam, which is mainly rainy season, is already overflowing.

The geography of the region limits the catchment area that feeds Knysna’s storage capacity.

“We need to bring the level of consumption down to below our pumping capacity,” says Mayor Wolmarans, “In doing so the Alkoford Dam and the Gibeon dam can be refilled. When these dams are full, it gives the town a buffer of three months, instead of a few weeks as is the situation at present.”
